Does not limit how many documents are scanned as other applications, and your automatic scan makeup is quite ok. Not only the paper on a light color surface, or have too many other objects in the frame. My favorite part is the ability to load directly from my phone to my computer's desktop (because they are connected by iCloud.) If this is not yours you can airdrop to the downloads folder. the back and white filter is as good as a printer scan, and there is an option to change the document after taking the photo. I never needed any other part of the app, so I don't need a prize, which is amazing. charge also as pdf, which saves me all the problem of converting it myself. compared to other scanning apps, I found this to beMore efficient, since it works well and has frustrating limits for free users. I've been using Genius Scan for almost 2 years, I rarely leave a review for any application, but I feel like this deserves to be recognized. It is very easy to use, clarity on the scanned document is great, there are a lot of customizable scan settings including you can choose, you can also automatically load to Dropbox or Google Drive, I also have been able Contact the developer on a simple change to selection of folders within Google Drive by alphabetical order and day they were able to host the request in their next update that was extremely useful. If you are travelling a lot like me and not always to your desk this application is an absolute life saving. Even when I'm in my office I don't use my copy scanner because it takes too much time and quality on the application of brilliant scan is just as good if not better, and it's much faster. Save yourself a lot of time and start using this application today. I love the app. Used and recommended since 2013 are the free version. From a week or two does the functionality à € œeNasCostaà € save-to-dropbox has been canceled from the free version. Quite right but, a) it happened in the background, not through an update, son of the barato. B) I would happily update only for that function; I don't need anything but not for \$ 7.99. I would be happy to pay a couple of dollars, not so c) I considered the cloud option but still, totally out of price. I pay already Dropbox and Apple Cloud, more IDRice Cloud for backups. \$ 3 a month for a small subset of documents? Guys, this should be the annual, not monthly cost. It seems you're trying to clear some paying customers instead of widening your base and make us loyal. Unfortunately, after 5 years of happy customer and promoter, I will start looking for other options. This costs much more than more dollars that you are trying to load.
